Abstract

The application for learning sign language and Morse code was developed to systematically support the learning of sign language and Morse code. It is designed to be easily accessible and user-friendly for the general public. The application also aims to enable users to apply the acquired knowledge effectively in communication and to help reduce communication inequality in Thai society, especially between the general public and individuals with hearing or communication impairments. The developed application includes accurate and easy-to-understand learning content, an appropriate presentation format, and a convenient design. The user satisfaction evaluation showed that most respondents were highly to very highly satisfied with the ease of use, visual appeal, content accuracy, and stability of the application, indicating that the application can effectively meet users' needs.

Keywords: Sign language, Morse code
